

H.W 22nd July 2026

1. Java generates # code for every Object. Find out the # code in Java

```
class Demo {  
    public static void main(String[] args) {  
        String str = "Hello";  
  
        int code = str.hashCode();  
        System.out.println("Hash code: " + code);  
    }  
}
```

Output:

Hash code : 69609650

⇒ The main purpose of generating a hash code is to enable fast searching collection and storing of objects in hash-based collection such as

⇒ Hash map

⇒ Hash Set

⇒ Hash Table
